

Suggested Maintenance

The best way to care our copper products is surprisingly easy. For basic cleaning simply use a mild soap, water and sponge when needed. You don't need other cleaners, don't use abrasive materials or harsh chemicals on any of our products these can harm the surface.

After every use, wipe the product with a clean cloth.

A copper finish is a living finish and never really stops changing in color. The evolution of a copper finish is gradual, and as it ages it becomes even more beautiful. You can greatly reduce this change with the use of wax.

To help keep the copper product looking its best, apply a thin coat of wax occasionally. The wax will help to maintain the luster of the copper and will promote better water runoff. If your product has a scratch, do not try to match it using fibers.

To prevent discoloration or damage to the finish, avoid acidic substances left in contact with the copper surface, you need clean with water your copper product. Thoroughly rinse the sink after working with acidic substances. Do not use chemical cleaners or abrasive substances that might remove the patina, and be sure to rinse the sink well should one of these come into contact with the copper. Do not use vinegar to clean the sink.

Don't put sharp things, because they can scratch or damaged.
